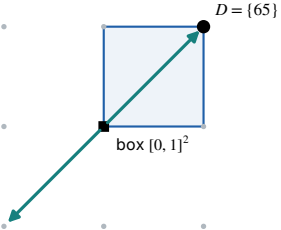
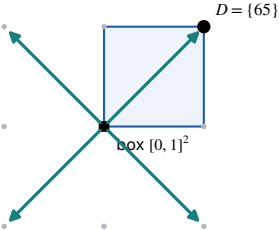
$x_{13} = 4225/64$: $\mathrm{Gr} = \{\pm(1,1)\}$



$y_{13} = 4225/8$: $\mathrm{Gr} = \{\pm(1,1),\ \pm(1,-1)\}$



same active primes $\{5, 13\}$, same box, same $D(x) = D(y) = \{65\}$, different primitive systems (Paper III Thm. R3T1(i); D recomputed)
