relations of the lattice Λ_b ($d \equiv 1$ mod b; arithmetic availability)

primitive relations Gr_q (Paper I)

realised moves = edges of K_{move} (function of D)

SIV-P3(a): realised set grows along every orbit (Lemma M)

dormant: $e_i - e_j \in \mathrm{Gr}(x)$ at $x = P^2/\ell$,
active at $y = (Pq)^2/\ell$ (Paper III Thm. A4T1)

primitive but not realised ('dormant')

primitive status can be lost (Paper I, Thm. laws, L1)
