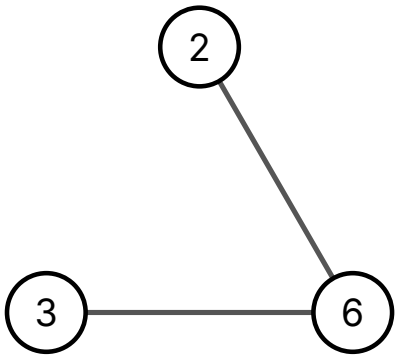
$K(D(72))$: path $2 - 6 - 3$



swap graph of $1 \to 72$ (two vertices)

$K(D(t))$ depends on t only through $D(t)$

$D(900) = D(9000)$ but source 4 gives (2 histories, 1 class) vs (4, 2)
$\Rightarrow$ no map $K(D(t)) \to$ history topology (SIV-P5)
