Specimen $21^8/5$: $\Lambda = \{a \equiv b\ (4)\}$ on the box $Q = [0,4]^2$ (exact enumeration)
a fibre F: 6 points
(0,4)
(4,4)
(3,3)
(2,2)
(1,1)
(4,0)
$0 \notin F$
exponent vectors (a, b); box dashed
b K_{abs}: (6, 11, 1), $b_1 = 5$
abstract: curved arcs are formal edges; thick cycle = boundary of the 2-cell
c union U: $b_1 = 2$ (holes hatched)
straight-line realisation; edges cross the square, so K_{emb} is not defined
