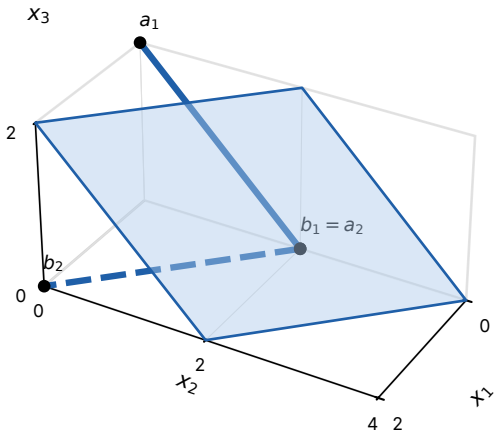
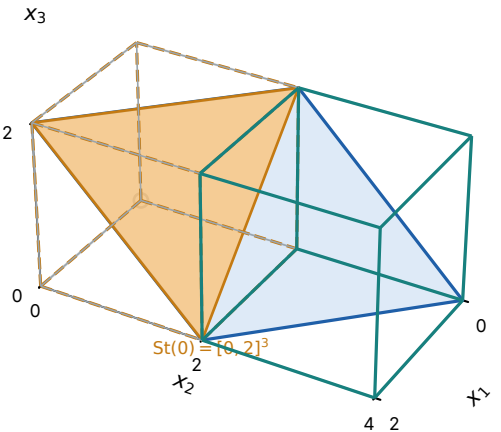
Hard cell of the no-free-coordinate example: $a_1 = (0, 0, 2)$, $b_1 = (0, 2, 0)$, $a_2 = (0, 2, 0)$, $b_2 = (2, 0, 0)$; $u = a_1 + a_2$

a $c = [a_1, b_1] + [a_2, b_2]$



b tiling of $Z^0 = [0, 2] \times [0, 4] \times [0, 2]$ by $2\mathbf{Z}^3$-cells



Every tile of the tiling not containing 0 is a cell of $U(\Lambda', Q_c)$; only the triangle $T_0 = c \cap \mathrm{St}(0)$ (orange) can lie outside it.
