cells, centre criterion (B1, B2)
Thm: circuit-partition criterion (G10-E1)
rank >= 3 for any collision (B-LOW)
full support, 1 in C (G10-F1)
local rank-3 extraction (G10-L5, B-COMMON)
rigidity (G10-R)
no singleton circuits (G9-Z, G11-L5c)
affine reduction (G10-A1)
vector-space partition (G11-L5)
descent to minimal sub-box (shortening, G9-T5)
counting identity, Parseval (G11-L5, G11-L5b)
threshold lemma (p>=9, 3<=m<=p/2)
n2 >= p-1 for p>=9 (G11-L6)
finite enumeration p<=8 (simplex normal form)
W2 for all minimal boxes (G11-T3)
Thm: r_min = 3 for every non-embedded box (G11-T4)
